

Guidance:

You can use this sheet as a template for a blank for slumping on the Renegade Tapered Wall Sconce Mold (P/N RL 014)

This template is sized to make the largest possible sconce shade for this mold. It will be approximately 12" long, 9-1/4" wide at the widest and 4-1/4" wide at the narrow end.

Place your glass over the pattern (for clear glass) or cut out the pattern on the solid lines. Cut your glass to this shape for the best fit to the mold.

Once you have fused your blank, set it on the mold in your kiln. You may want to prop the mold up on short stilts to prevent the glass from touching the kiln floor.

Ensure that it is precisely centered so that it will slump straight. You may even want to make marks on the mold and glass for the best possible alignment.
